

Splitter Valve & Cat's Eye Weir

Splits Effluent Flow For Recirculation

Zoeller Pump Company's Splitter Valve is designed to divide effluent flows by a set ratio for wastewater recirculation. Wastewater treatment systems use recirculation as a means to achieve greater treatment efficiencies. 80% recirculation is a common rate, but the ability to customize and easily adjust is often desirable. By simply inserting the appropriate cat's eye weir, the recirculation rate can be quickly and easily adjusted in the field. The 80/20% cat's eye weir comes standard. Please consult the factory for recirculation rates between 60% and 90%.

Features

- Many different weir plates are available
- Easy to install
- Adjustable return rate
- Solvent weld to PVC

Splitter Valve & Cat's Eye Weir	
Part Number	Description
5050-0003	Adjustable splitter valve
018265	Black Weir
018266	10% Weir
018267	20% Weir
018268	25% Weir
018269	30% Weir
018270	40% Weir
