

Spherical Media

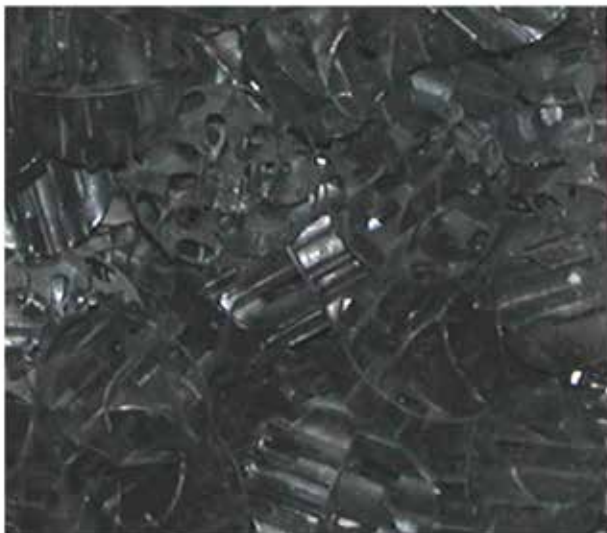

Provides Abundant Surface Area For A Variety Of Filtration Applications

Zoeller Pump Company's spherical media provides abundant surface area for BOD, CBOD₅, and TSS reductions as well as biofilm development. The engineered design promotes greater contact time between organic material and attached bacteria as wastewater flows through the media. Applications may include trickling filters, fixed film or attached growth systems, and submerged aeration units.

Features

- Non-corrodible in septic environment
- 122 in² surface area
- Lightweight
- Easy to transport
- High resistance to most chemical, biological, and physical agents
- Lifetime warranty

Trusted. Tested. Tough.®

Zoeller Pump Company's spherical media provides abundant surface area for biological treatment to occur and for the capturing of suspended solids.

Material: ABS

Weight: 1.5 oz

Volume: Approximately 512 media balls in one cubic yard and 729 media balls in one cubic meter

Applications:

- Trickling filters
- Fixed film
- Attached growth systems
- Submerged aeration units
