

# Environmental Products

Provides abundant  
surface area for a variety  
of filtration applications

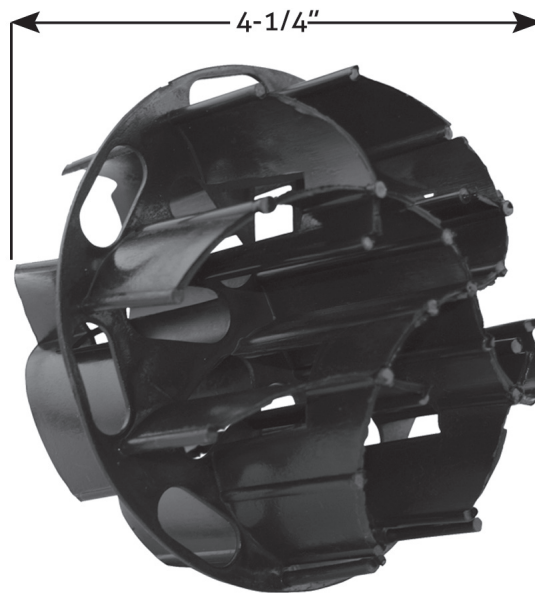

## Spherical Media

Zoeller Pump Company's spherical media provides abundant surface area for BOD, CBOD5, and TSS reductions as well as biofilm development. The engineered design promotes greater contact time between organic material and attached bacteria as wastewater flows through the media. Applications may include trickling filters, fixed film or attached growth systems, and submerged aeration units.

## Features

- Non-corrodible in septic environment
- 122 in<sup>2</sup> surface area
- Lightweight
- Easy to transport
- High resistance to most chemical, biological, and physical agents
- Lifetime warranty

Material: ABS

Weight: 1.5 oz

Volume: Approximately 512 media balls in one cubic yard and 729 media balls in one cubic meter

Applications:

- Trickling filters
- Fixed film
- Attached growth systems
- Submerged aeration units
